

Leveraging Technology Systemically

During the 2016/17 school year, Alberta Technology Leaders in Education (ATLE) partnered with the College of Alberta School Superintendents (CASS) and Shift@Scale, a private company, to provide a series of activities designed to assist jurisdiction leadership teams in leveraging technology to support student-centered learning. Particular attention was focused on the Learning and Technology Policy Framework from Alberta Education. The project involved 32 jurisdictions across Alberta. The content and tools used in the project have been assembled into a set of [four learning guides](#) which can be used by jurisdiction teams to leverage technology in support of student-centered learning. The guiding committee continues to design activities and resources for the 2017/18 school year. These will be posted on the ATLE site as they become available.
